CAMPAIGN OBJECTIVE

The primary goal was to capture the attention of creators, entrepreneurs, and side-hustlers across TikTok and Instagram, driving low-cost awareness and installs for Superapp in a highly competitive vertical.

EXECUTION SUMMARY

We deployed a roster of 13 niche creators to test multiple narrative angles. We rapidly identified a breakout format, "Sidehustles for Idiots," and scaled it. This format achieved exceptional viral reach and established a strong cultural footprint in the vibe-coding niche.

Unprecedented Efficiency

The \$0.89 CPM Advantage

We reached 1,000 highly-targeted users for less than \$1. To replicate the 1.88M+ tracked views we generated organically for \$1,680, a comparable paid Meta campaign would have cost up to \$26,000.

CAMPAIGN IMPACT

Delivering a **10x to 15x efficiency advantage** over industry standard paid media.

CHANNEL / METHOD	AVG. CPM
Meta Ads (App Install)	\$8 - \$14
TikTok Ads (App Awareness)	\$6 - \$10
Google UAC	\$3 - \$7
Paid Influencer Post	\$5 - \$20
Industry Avg UGC	\$2 - \$5
The Viral App (Superapp)	\$0.89

Performance Summary

The campaign delivered results that exceed industry benchmarks across every dimension: organic reach, cost efficiency, content quality, and cultural impact.

Metric	Result	Assessment
Total Views	2,055,336	Exceeded target
Tracked Organic Views	1,888,032	Strong organic distribution
CPM	\$0.89	10x better than paid average
Total Spend	\$1,680	Highly capital-efficient
Total Posts	225	Strong content volume
Engagement	74,100	3.6% engagement rate
Viral Breakout Post	1.4M views	Organic viral, no paid boost
Format Imitation	Multiple competitors	Benchmark-setting creative
Platform Split	Instagram 51% / TikTok 48%	Well-balanced distribution

The Power Law of UGC

We test broadly to identify outliers. Creator Mac Cox accounted for 93.5% of all campaign views, proving the value of our rapid-testing methodology.

TOTAL	1,888,032	168	122	-	\$1,680

Winning Creative Frameworks

#1 BEST PERFORMER

"Sidehustles for Idiots"

1.4M+ views on a single post

Format: Creator on camera, direct to viewer, home or bedroom setting. Fast pacing, jump cuts, high energy.

The Hook: "Welcome to Sidehustles for Idiots." Text overlay locked at top throughout. It tapped into the lazy entrepreneur identity: aspirational but accessible. The self-deprecating framing lowered the barrier to sharing and commenting.

The Impact: The three-part series built audience retention. Within days of the first viral post, competing vibe-coding and AI apps began replicating the format, the strongest possible validation.

#2 TOP PERFORMER

Silent Under 15s

High Retention Rate

Format: Creator working out or at a cafe, laptop open with Superapp visibly building an app on screen. No talking, no voiceover. Under 15 seconds.

The Hook: Text overlays tell the story: "POV: Your app is being built while you're at the gym." Cut to close-up of AI generating code. Cut back to creator, unbothered. The contrast is the engine.

The Impact: Silent, cinematic content performs well in the aspirational builder aesthetic and requires zero explanation. The format sells itself.

#3 TOP PERFORMER

Silent Text-Driven

Strong Conversion Intent

Format: Creator at desk or cafe, focused, not looking at camera. Slow, deliberate pacing. Under 15 seconds.

The Hook: Text appears line by line: "ChatGPT for ideas. Superapp for the build. Supabase for data. Stripe for payments. Don't overcomplicate it."

The Impact: Positions Superapp as a core tool in a credible builder workflow alongside recognized brands. The close resonates strongly with the non-technical audience.

T Phase 2: Strategic Pivot

Key Learning: The Audience Proficiency Gap

While our top-of-funnel reach was massive (2M+ views), qualitative analysis of viewers revealed a bottleneck. The target demographic lacked the technical proficiency to fully grasp concepts like coding and deployment. Because of this, the core advantage of Superapp was not entirely translating to the end user viewing the reels.

1 Pause Top-of-Funnel Campaign

Temporarily pause the current builder-focused UGC campaign to stop driving traffic to users who are intimidated by the perceived technical learning curve.

2 Wait for Product Maturation

Allow time for the early adopters acquired in Phase 1 to build actual, non-technical, functional applications using the Superapp platform.

3 UGC for Generated Apps

Shift focus to creating UGC campaigns that market the specific apps built by Superapp users, rather than the Superapp platform itself.

4 Demonstrate Value Indirectly

By showcasing successful, easy-to-use end products built by absolute beginners, we tangibly prove Superapp's capability without needing to explain how it was made.

Ready to execute the next phase.

We are prepared to pivot our creative strategy to focus on product-led UGC, ensuring Superapp's core value is universally understood by the broader market.
